

# Our 8 Points Service Program – just look and see!

We offer the following services to let your ideas become innovations:

Innovation Management

1

Technology Scouting

2

Consulting for Funds

3

Technology Portfolio

4

Infrastructure & Manufacturing Equipment

5

Engineering Services

6

Sensors & Systems

7

Product Development

8

## Our Expertise – Your Advantage

Miniaturisation is your ticket to future – MicroMountains can get you there!

Let us help you to realise your innovations and strengthen your market position – benefit from our range of services:

- ▶ Development and production services
- ▶ High-performance R&D-resources
- ▶ Extensive pool of experts
- ▶ Professional innovation management
- ▶ Prospective risk management
- ▶ Use of best-practice-methods
- ▶ Stimuli for technology due to interdisciplinary thinking
- ▶ Knowledge leadership due to technology scouting

We help you to save time and money. For individual consulting please contact us:

MicroMountains Applications AG  
Romäusring 4

## Your Partner for Innovation Management

The application centre MicroMountains Applications is your service provider for the development, technical implementation and optimisation of your products and production processes based on the latest high-technology.

Your Innovation is our Aim.

Let us show you numerous possibilities of latest miniaturisation technologies.

Our special expertise address the field of miniaturisation and the integration of latest knowledge from research and development.

Miniaturisation technologies are one basis for future innovations. This is how your products and production processes get smarter – smaller – cheaper.

We offer the expertise you are currently in need of.

## Our 8 Points Service Program – just look and see!

We offer the following services to let your ideas become innovations:

<b>Innovation Management</b> 1	 A group of four business professionals (three men and one woman) are gathered around a table, looking at documents and discussing a project.	► We support you during the analysis of potentials as well as the creation of your innovation strategy and assist you during the whole innovation process with a well-established risk management.
<b>Technology Scouting</b> 2	 A magnifying glass is held over a green printed circuit board (PCB), highlighting a specific component.	► As technology experts we offer a continuous analysis and evaluation of current and future trends. We provide you individually with strategically important information about the relevant technologies.
<b>Consulting for Funds</b> 3	 A close-up of a calculator and several Euro coins on a wooden surface.	► To minimise technical and economic risks of your innovation project we include funding possibilities where required. We help you to identify and request for the appropriate funding measures.
<b>Technology Portfolio</b> 4	 A person wearing a white lab coat and a face mask is holding a small, square microchip.	► We offer one of the most extensive and interdisciplinary technology portfolios in the fields of miniaturisation, sensor and actuator technology as well as system integration.
<b>Infrastructure &amp; Manufacturing Equipment</b> 5	 A view of a clean, modern manufacturing facility with workers in blue protective suits and masks working at stations.	► With MicroMountains Applications you have access to an extensive high-technology infrastructure. We offer solutions – whether it should be for advance tests, prototypes or products.
<b>Engineering Services</b> 6	 A 3D rendering of several interlocking mechanical gears, some in a blue wireframe style.	► For the development of your innovation you get integrated engineering support from our pool of experts – from conception via construction, simulation and measurement up to system integration.
<b>Sensors &amp; Systems</b> 7	 A close-up of a green printed circuit board with various electronic components, including a microchip.	► Many years of know-how in the development of sensors, actuators and systems offer the possibility to realise highly productive mechanical, electronic, optical or fluidic sensor-actuator-systems.
<b>Product Development</b> 8	 A collection of mechanical parts, including bearings and gears, resting on a technical drawing or blueprint.	► An innovation is a product successfully launched to the market. We support you during the whole product development process – from product planning through prototyping until series maturity.
